AMAN KUMAR | Smart Contract Developer

dhanyosmiresearcher@gmail.com | X | LinkedIn | GitHub | Portfolio | +91 7485823303

EXPERIENCE

C3iHub, IIT Kanpur | Blockchain Developer Sep 2026 – Present

Independent Web3 Security Researcher Mar 2026 – Present

- CodeHawks contest (BattleChain Confidence Pools) – finished **#1**, **1 Medium, 1 Low** finding **Report**
- Private **Uniswap v3 integration** audit – **3 Critical, 3 High, 3 Medium, 4 Low** findings
- Worked on BLOKCapital's entire price-feed oracle structure, ensuring it was bug-free – fixed 2 bugs: stale price feeds & missing L2 sequencer checks **Post**

Digichain (Bima Labs – DeFi Protocol) | Smart Contract Developer Aug 2024 – Aug 2025

- Implemented **UUPS upgradable smart contracts** using the Succinct Protocol to enable on-chain verification of off-chain zero-knowledge proofs (**ZKPs**) **View Code**
- **LayerZero v2** – configured messaging, DVN and Foundry script for debugging and testing **View Scripts**
- Integrated **Chainlink CCIP** to enable lock/unlock mechanism for cross-chain transfers of USBD, and documented a comprehensive README guide **View Guide**
- **PSM –** implemented core logic, wrote unit and fuzz tests in Foundry, raising **code coverage to >95%** **PR #130**
- Optimized Hardhat deployment scripts and added **automated contract verification** as part of the deployment process, enabling **one-command deployment + verification** **PR #132**

PROJECTS

Talon | Solo | Solidity | Foundry | Live App | Demo | GitHub Aug 2026

- Designed the **end-to-end architecture** – indexer, orchestrator & A-Pass poller feeding 2 contracts on Monad
- On-chain transfer agent for **Cleanverse-verified RWAs** – pays compliant holders directly, escrows (never forfeits) reverted ones, using the A-Token's own revert as the compliance check
- Integrated **6 live Cleanverse CVI/CVA endpoints** – decodes frozen/expired/no-pass reverts
- **90 Foundry tests** (unit, fuzz, invariants) proving solvency, live-tested with aUSDC

HACKATHONS

Swarm Escrow | Solo | Won #3 (BOT Chain, AI Agent Track) | GitHub | Live Demo | Demo Video

- **Multi-agent 2-of-3 quorum** decides fund release; disputes escalate to a Senior Arbiter
- **83/83 Foundry tests passing** (72 unit, 9 fuzz, 2 invariant), Slither clean

FutureStack Gen AI Hackathon | Solo | GitHub | Live Demo | Demo Video

- My Invoice NFT **- full-stack NFT invoice DApp** with tested, gas-optimized Solidity contracts
- **AI-assisted** frontend integrated with IPFS & Polygon chain

TECHNICAL SKILLS

Languages : Solidity, Java, Python, JavaScript, Rust (Basic)

Standards : ERC-20, ERC-721, ERC-4626, ERC-7540, EIP-1167

Protocols : Uniswap, Chainlink, LayerZero, UUPS

Tool & Testing : Foundry, Slither, Hardhat, Unit Testing, Fuzz Testing

EDUCATION

- Government Engineering College Khagaria | B.Tech | CSE (IoT) | 2022–26 | CGPA: 8.85

ACHIEVEMENTS & CERTIFICATIONS

- Won 1st prize in Ideation Challenge organized by Department of Industries in college
- Won 1st prize in a college debate competition at AIXPO 2026
- Blockchain and Its Application | NPTEL | May 2025 | **Certificate**
